Dear Hiring manager,

I was excited to see your listing for a computer science foundation coordinator, and you mentioned that you are looking for a person who has a strong foundation in computer science. As a computer science student with more than 5 years of combined academic and industry experience (including four research article publications), I am confident that I would be a good fit to help others succeed.

When I was starting my bachelor's in computer science and engineering from GITAM University in 2018, as a new student who didn't even know how to program on computers, with the help of the internet, professors, and friends, I gained huge knowledge but it took me a lot of time, and with that, I worked as a research assistant under Dr. M. Bhavani and published "A Comparative Study of Various Data Visualization Techniques Using the COVID-19 Dataset" article. And helping new students is like helping myself in the past; I can do it much better now, which helps them succeed.

As a Master's in Data Science student at Drexel University, I can even teach students in the data science domain if they are interested.

I'm confident in my proven publications and grades, which show my passion for computer science, attention to detail, and desperate desire to learn and teach things. And by all these, I hope that I will be an asset at our university, and that you will allow me to contribute to our students' success.

I'm looking forward to talking with you more about my application and qualifications. And thank you so much for your time and consideration.

Sincerely,
Akhil Songa.
